1. Product description

1.1. Purpose of the document

This manual provides a detailed description of each page of **FEEL iQueue**. By reading this manual, you will understand the product features of **FEEL iQueue** and how to operate the Web interface.

1.2. Readers

The main readers of this operation manual include： **Admin, Teller, Lobby Manager,Operation Manager**

1.3. Definition, Abbreviation and Acronym

S/N	Term	Abbreviation /Acronym	Referent or meaning
1	FEEL iQueue	iQueue	Name of the system
2	ip	ip	Server address of FEEL iQueue system installation
3	port	port	Port number used by FEEL iQueue system

Table 1-1 Abbreviations1

1.4. Document Convention

Conventions	Meaning
Bold type	Indicates a keyword. You can see the meaning of the keyword in Table 1-1
[xxx]	Represents a button, xxx represents the name of the button, such as a new button, which can be represented as [New]
admin	Admin indicates the administrator user
“xxx”	The contents in quotation marks represent some key prompt statements of the system
xxxxxx	Password after user account reset

Table 1-2 Document Agreement

2. Starting to use

2.1. FEEL iQueue management platform

Welcome to the FEEL iQueue management platform.

Google Browser is recommended. Enter the access address in the address bar similar https://127.0.0.1:18447/login, and then enter the login page.

After the system installation, the system will designate a system administrator with all permissions by default, Enter the initial user name and password, and click [Login] to enter the system.

The user's login user name and password are uniformly managed and assigned by the system administrator. After successful login, the user will be prompted that "the password is the initial password, please modify it in time." Click the [Modify] button to enter the password modification page, fill in the specified format, click the [Confirm] button, and log in to the system again according to the prompts.

Figure 2-1-1 Login Page

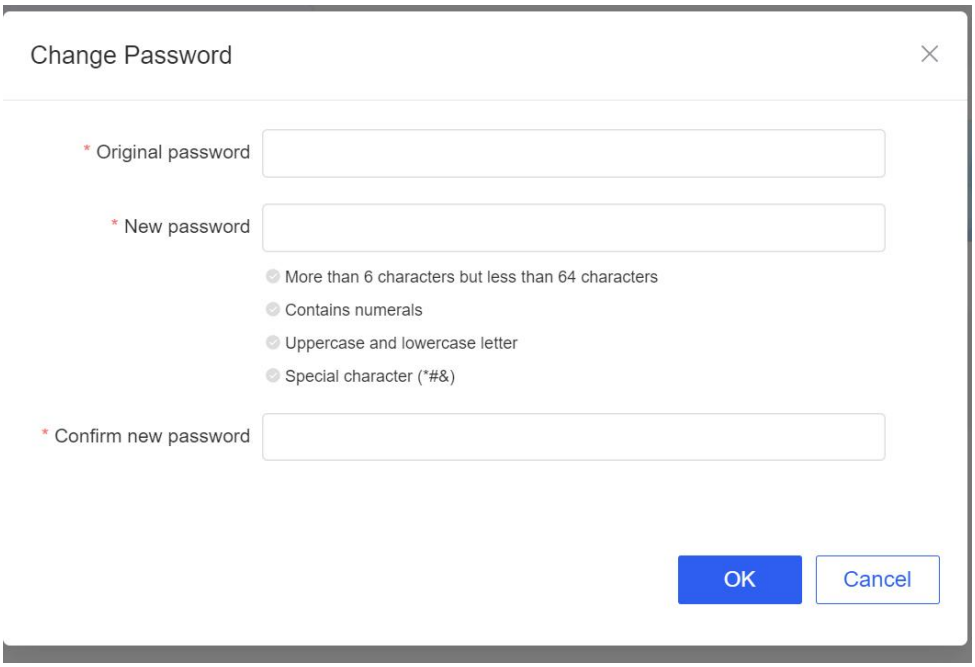

Figure 2-1-2 Password Modification

3. Dashboard

3. 1. Statistics

After the login is successful, the Admin user will visit the Admin homepage by default to display various statistical data intuitively, and the user can see the important data at a glance.

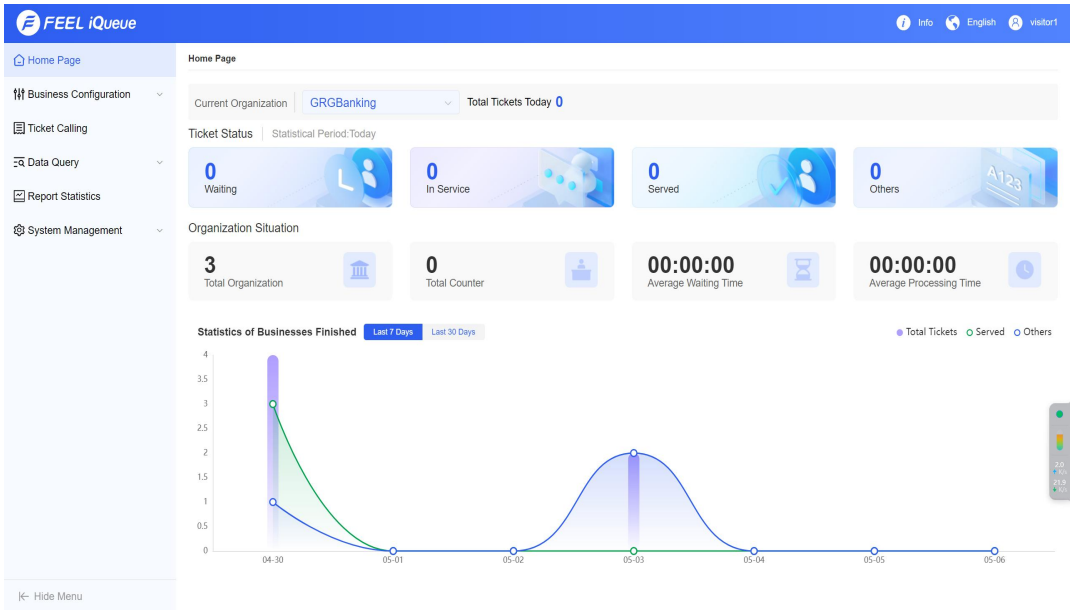

Figure 3-1-1 Admin Home Page

❖ **Select the organization data that the current system needs to display. After the selection is complete, the ticket number status and the information of the current organization are displayed dynamically below.**

❖ **Displays the number of current institutions and their subsidiaries, the number of total Windows , the average waiting time and processing time of the institutions**

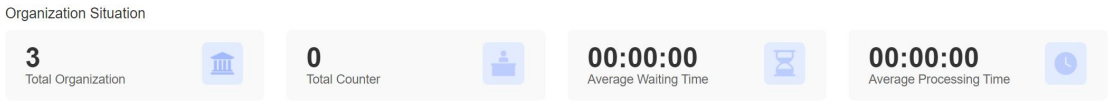

Figure 3-1-4 Organization Situation statistics

❖ **A trend chart of ticket numbers within the last month or seven days**

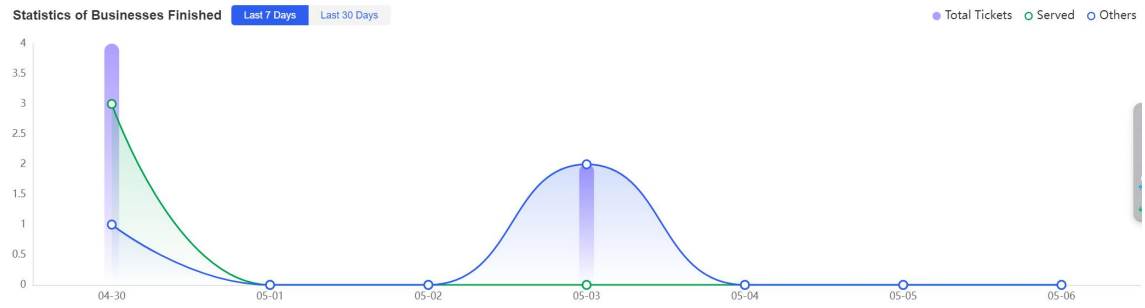

Figure 3-1-5 Ticketing trend chart statistics

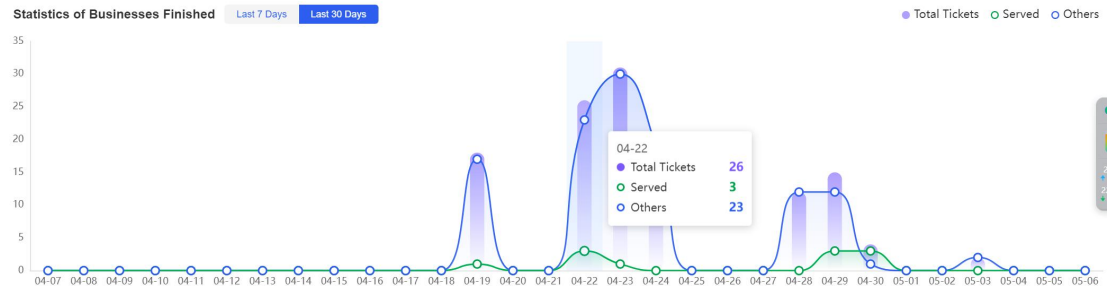

Figure 3-1-6 Ticketing trend chart statistics

3. 2. Info

Click the [Info] button to see the License version and System Version.

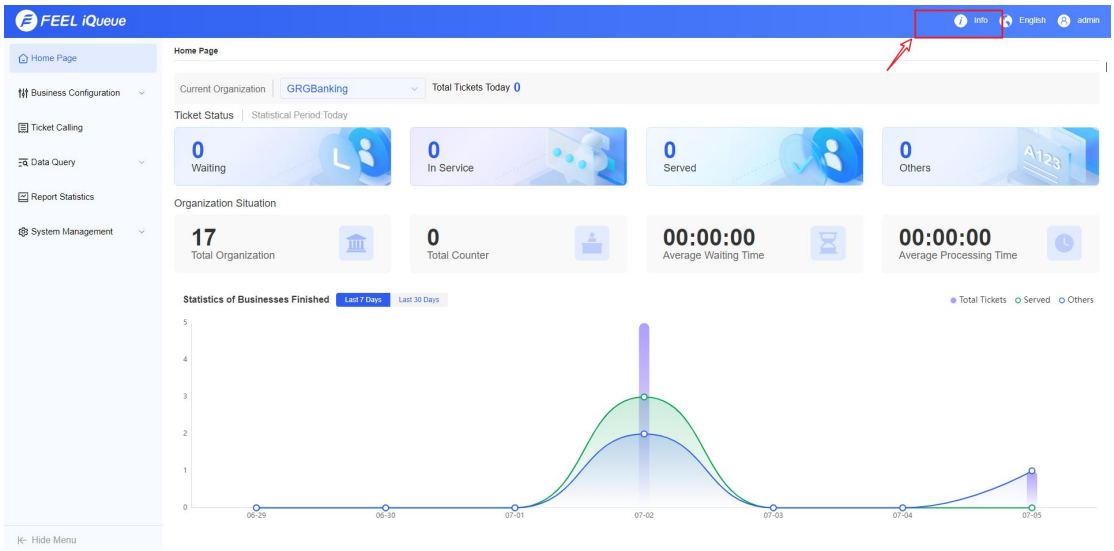

Figure 3-2-1 Homepage

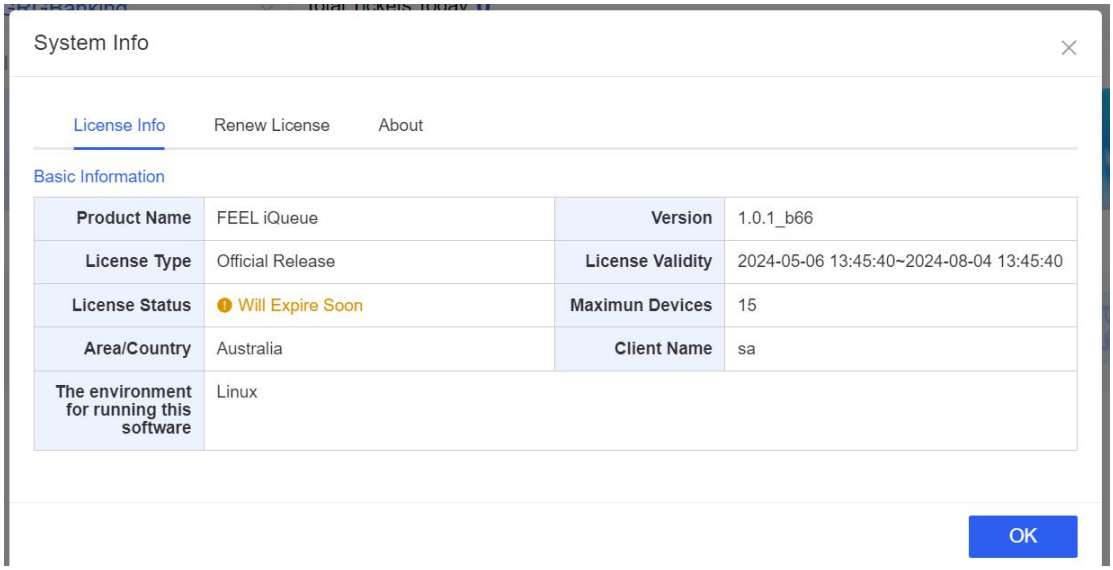

Figure 3-2-2 System information

3. 3. Language

Click the [English] / [Simplified Chinese] button to switch the system language.

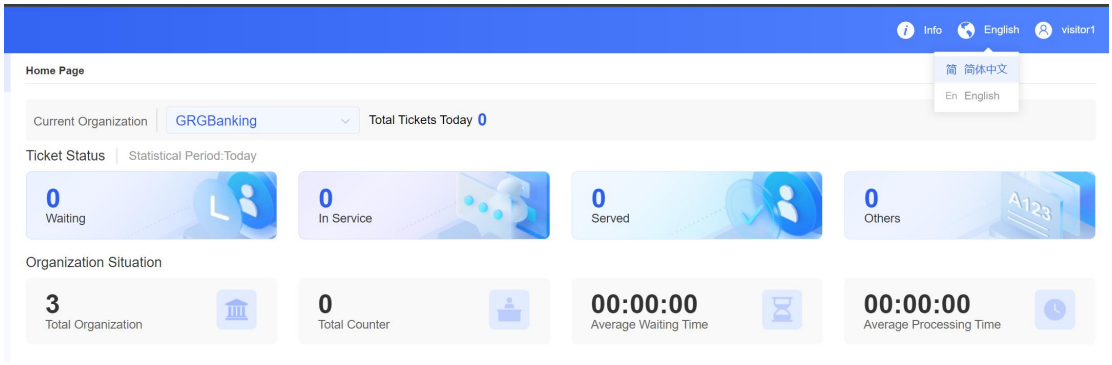

Figure 3-3-1 Switching language legend

3. 4. User Information

Click the current account, slide down the function selection, including: [change the password], [exit the system] button, you can perform the relevant function operation.

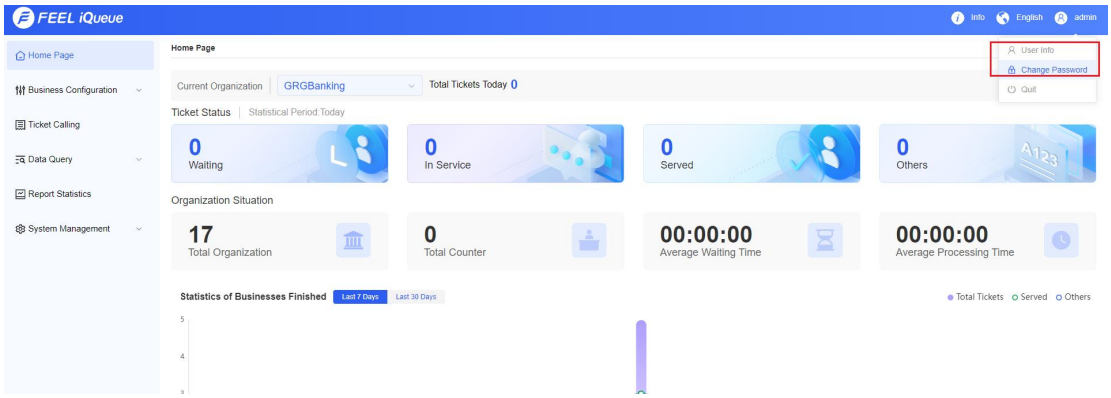

Figure 3-4-1 User Information

Function Introduction：

- **User Info**

View the current user information

- **Change Password**

Click the [Modify Password] button to modify the password for the current account number and support strong password verification. As shown in Figure 2-2.

- **Quit**

Click the [Exit] button to return to the login page as shown in Figure 2-1.

4. Business Configuration

4.1. Business Management

This function module is used to set the business that the system can handle.

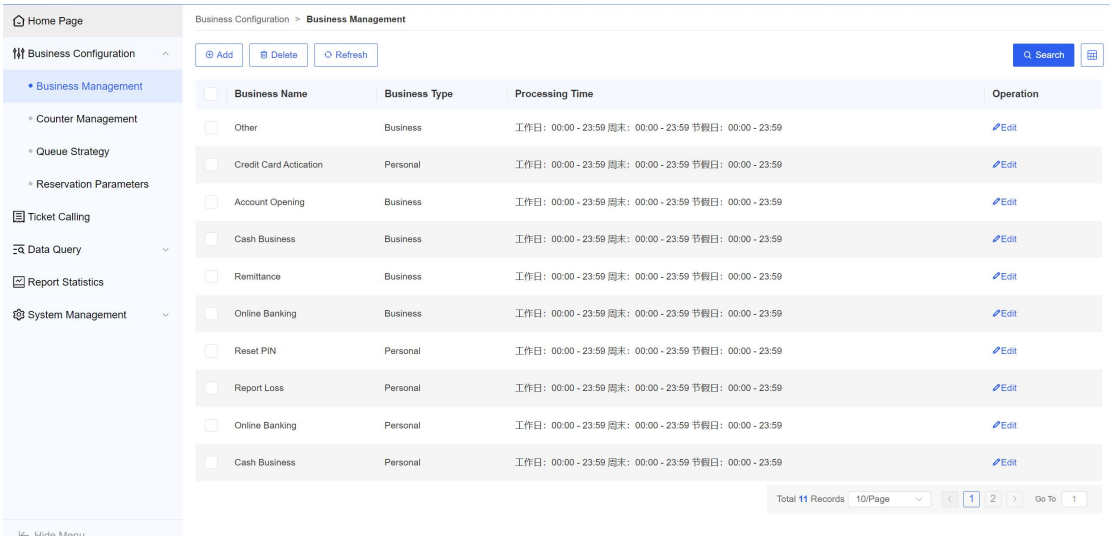

Figure 4-1-1 Business Management Legend

Function Introduction：

- **[Add]** Add system business information for future window binding business. Such as **Figure 4-1-1.**
- **[Edit]** Edit system business information, change business name, business time, business type, and other information.

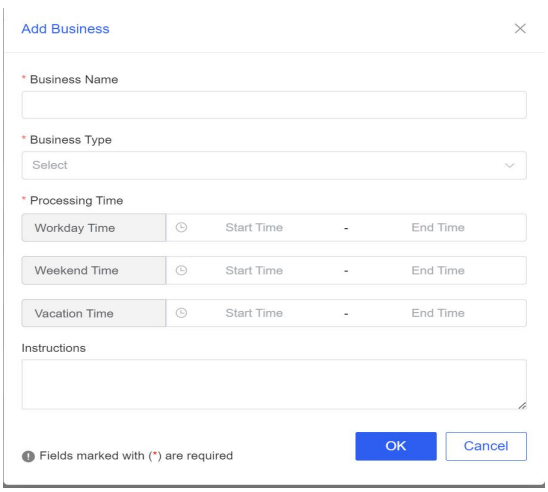

Figure 4-1-1 Add Business Page Legend

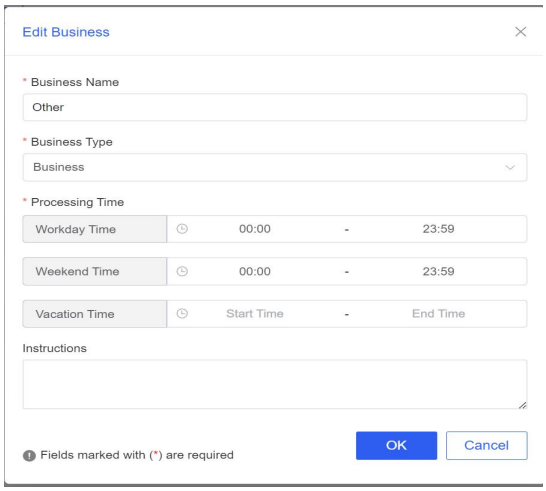

Figure 4-1-2 Edit Business Page Legend

➢ **[Search]**

Query the business list according to the search criteria. Such as **Figure 4-1-3**

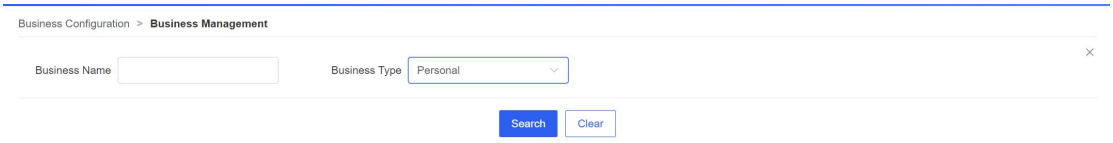

Figure 4-1-3 Search Business Legend

➢ **[Delete] [Refresh]**

Delete the service information and refresh the service list.Such as **Figure 4-1-4**

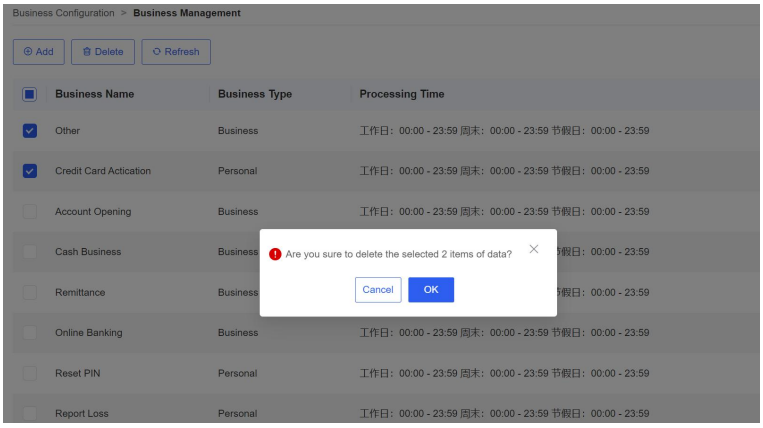

Figure 4-1-4 Delete Business Info Legend

4.2. Counter Management

This function module sets the organization to which the system counter belongs and the type of business it can handle.

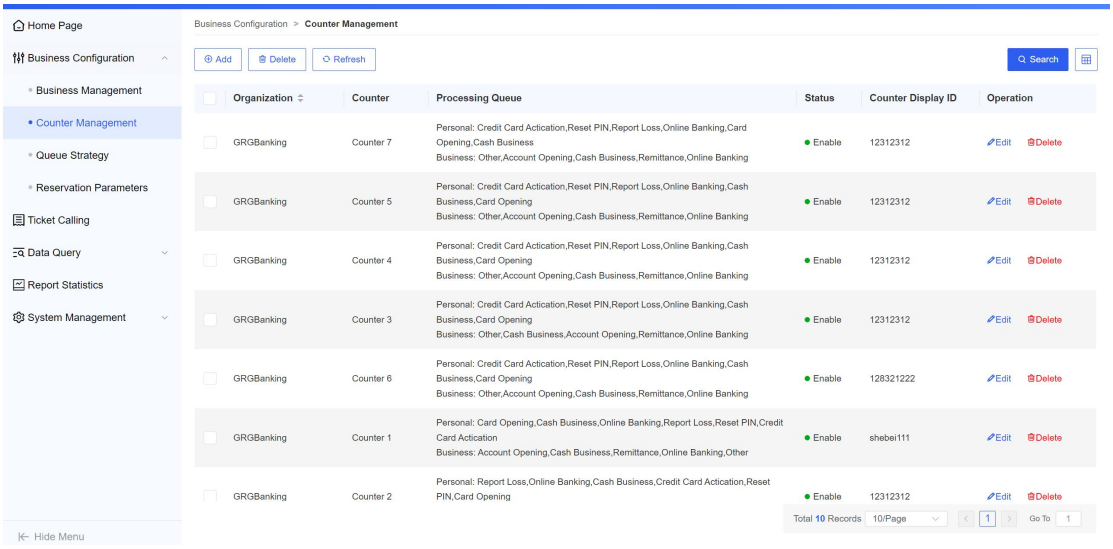

Figure 4-2-1 Counter Management Page Legend

Function Introduction：

- **[Add] [Edit]**

Add or Edit system Counter information.The counter needs to select its own organization and the business it can handle

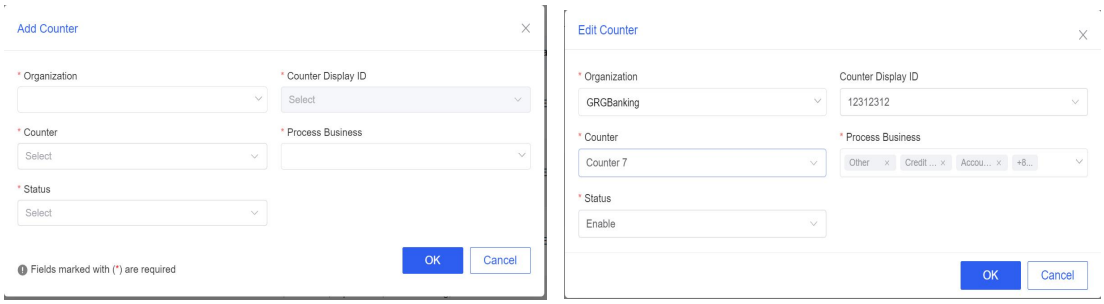

Figure 4-2-2 Counter Add or Edit Legend

- **[Search]**

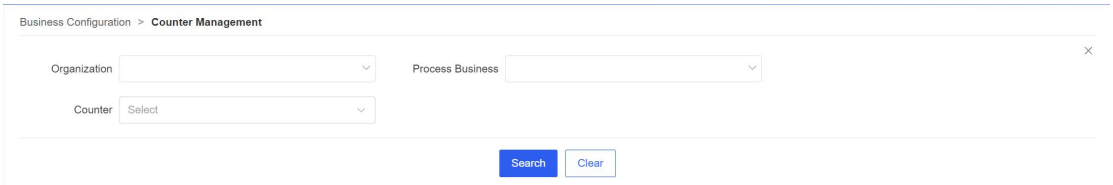

Figure 4-2-3 Counter selection condition Legend

- **[Delete][Refresh]**

Delete counters and refresh the counter list

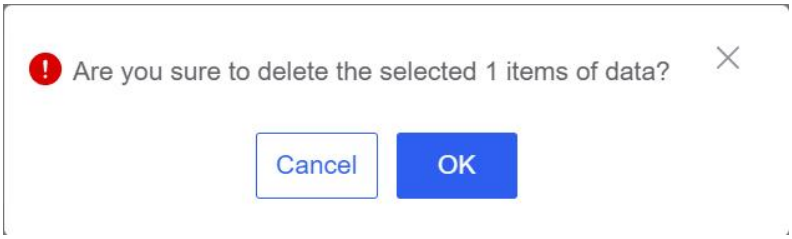

Figure 4-2-4 Counter Delete Info Legend

4.3. Queue Strategy

This module is used to configure the queuing strategy of a certain organization in the system and calculate the final queuing score by configuring the weight value of each factor.According to the queuing score, call the number in turn.

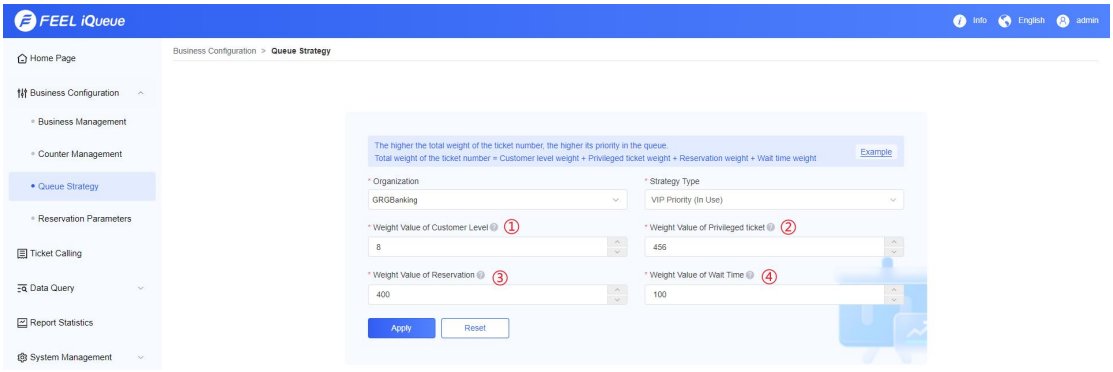

Figure 4-3-1 Queue Strategy Legend

Function Introduction：

- **[Apply]**

①Weight Value of Customer Level (Vip)

②Weight Value of Privileged ticket(The lobby manager takes the ticket number)

③Weight Value of Reservation(Reservation factor)

④Weight Value of Wait Time(Customer waiting time)

First, set the weight values of the above factors, and then click Apply. When customers take numbers, they will calculate queuing scores according to these pre-set weights. Such as **Figure 4-3-2**

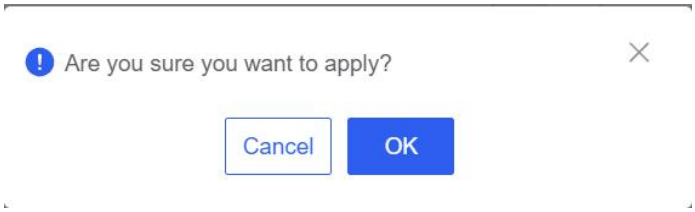

Figure 4-3-2 Application prompt box Legend

- **[Reset]**

If you accidentally change the wrong weights and want to return to the default Settings, click Reset to return to the default system weights

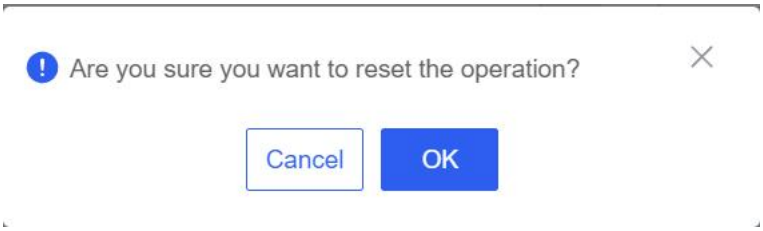

Figure 4-3-3 Reset prompt box Legend

4.4. Reservation Parameters

The system saves the reservation parameters of the organization, such as the Maximum Advance time, Available Reservation Time,Duration of each time slot,Default Reservation Quantity and Reservation Quantity of each time slot.

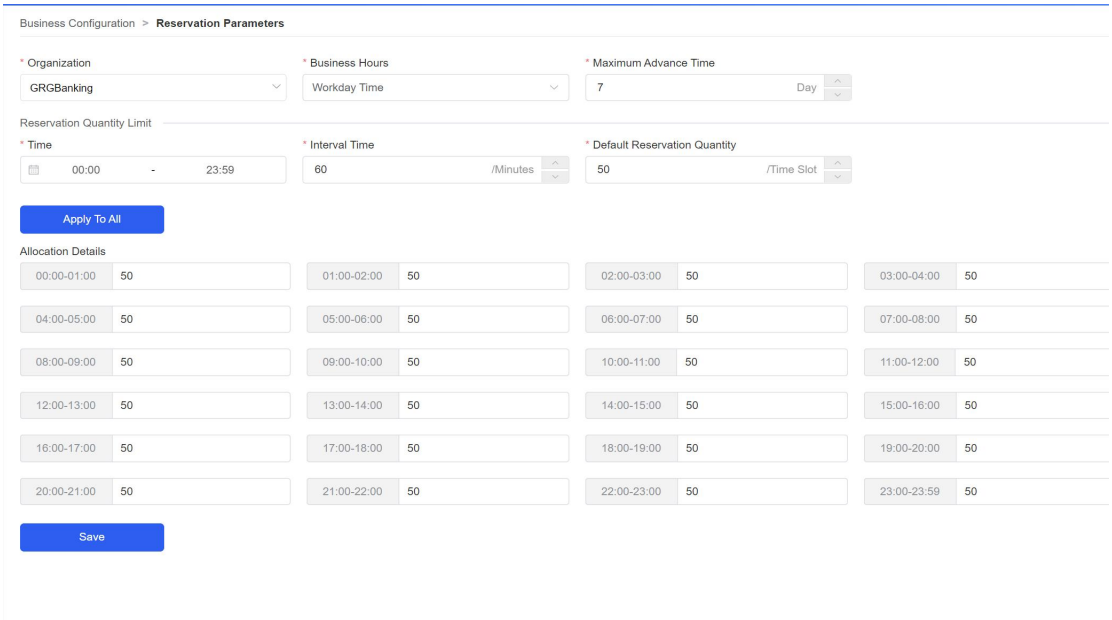

Figure 4-4-1 Reservation Params Legend

Function Introduction：

- **[Apply To All]**

Select Time period, time interval, default reservation number Such as **Figure 4-4-2.**,and click Apply To All,The result of the calculation will appear such as **Figure 4-4-3.**

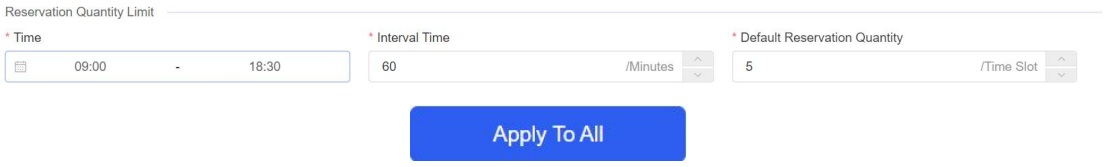

Figure 4-4-2 Reservation Quantity Limit Legend

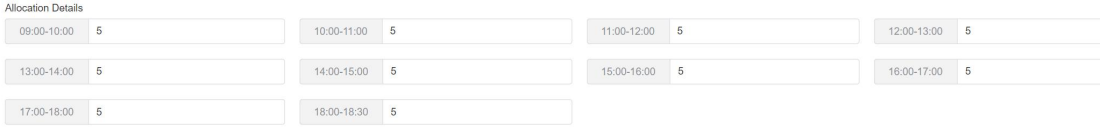

Figure 4-4-3 Time period calculation result Legend

➢ **[Save]**

Click save button the time period will save in the system

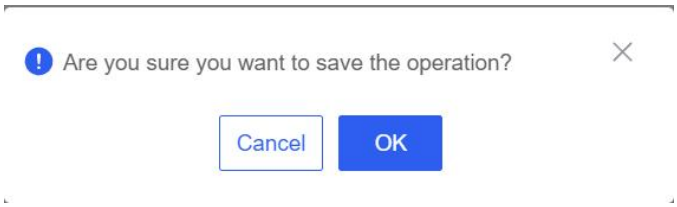

Figure 4-4-4 Time period Save Legend

5. Ticket Calling

5.1. Login Page

This module is the ticket number call function, by selecting the designated authority. Select the counter created in section 4.2 to log in.

The ticket number call page is shown as **Figure 5-1-1**.

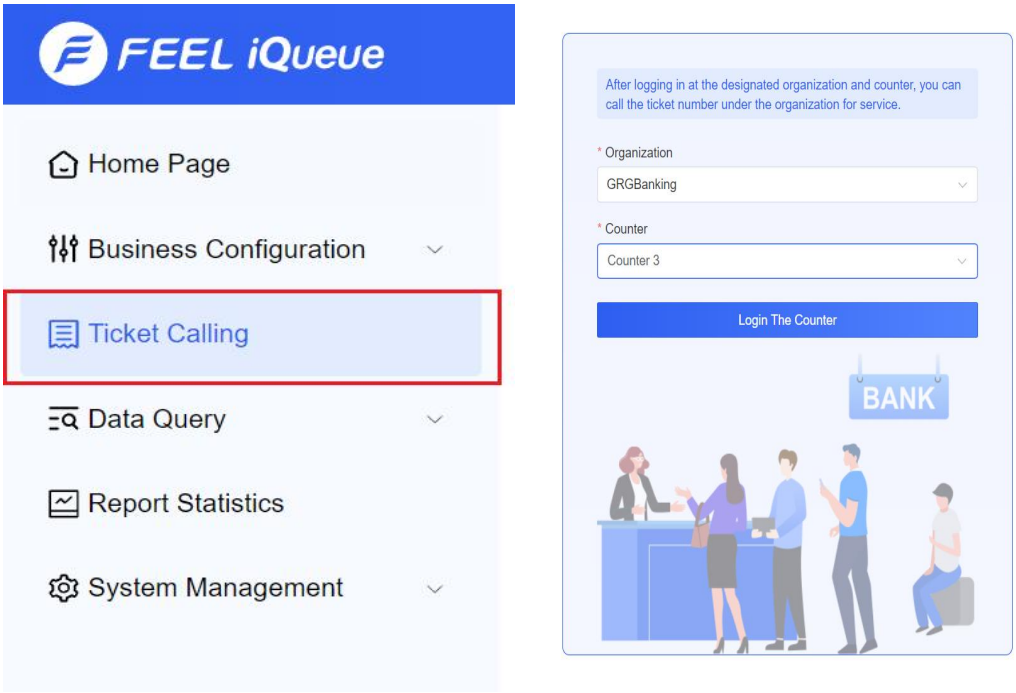

Figure 5-1-1 Time period Save Legend

Function Introduction：

➢ **[login The Counter]:**

Jump to ticket calling console page after logging in.

5.2. Ticket Calling Info Page

Ticket number call management page is as **Figure 5-1-1.**

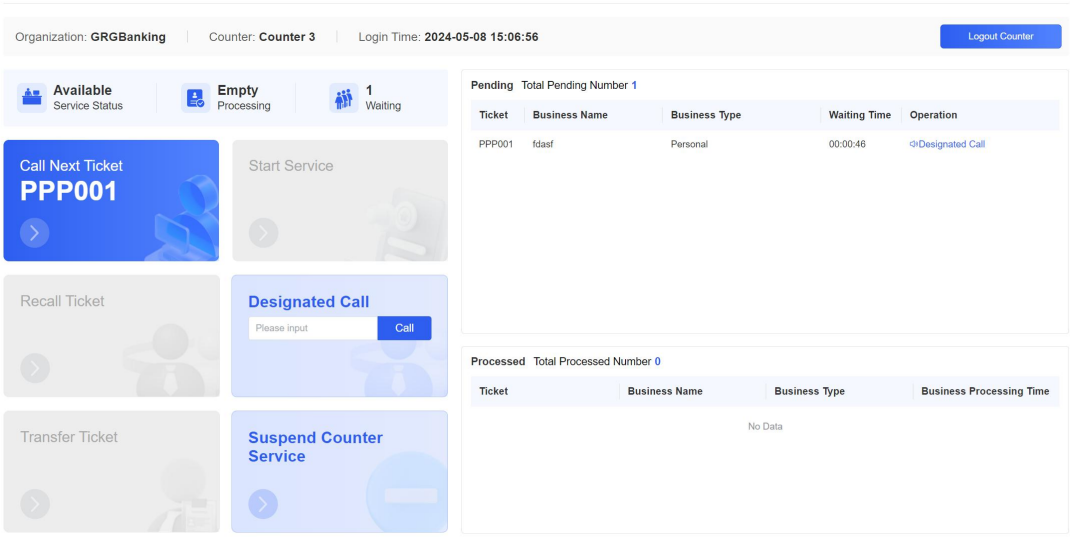

Figure 5-1-1 Time period Save Legend

Function Introduction：

8. System Management

8.1. User Management

Add, delete, edit and search system users as shown in 8-1-1.

The menu corresponding to each character is different.

Admin	All menu
Teller	Dashboard,TicketCalling
Operation Manager	Dashboard,BusinessConfiguration,TicketCalling,DataQuery,Report Statistics.
lobbyManager	Not allow to enter the system

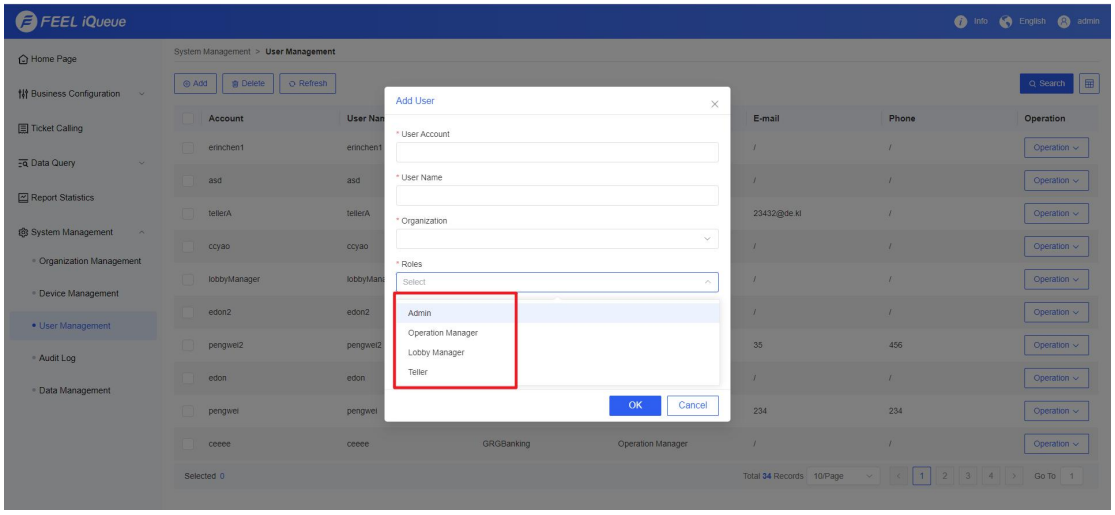

Figure 8-1-1 User Management Legend

Description of page function：

- **[Add]:** Establish a system user account, bind user roles, and bind to a certain organization such as **Figure 8-1-2.**
- **[Edit]:** Modifying user information allows for rebinding of user roles and institutions such as **Figure 8-1-3.**

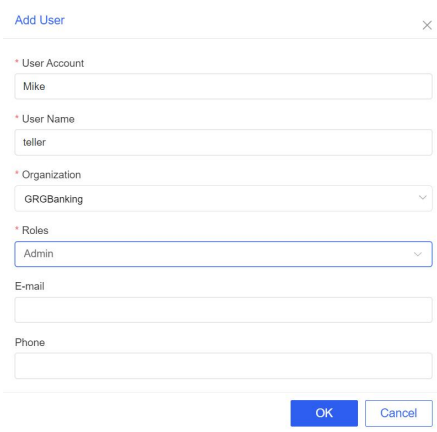

Figure 8-1-2 Add User Account Legend

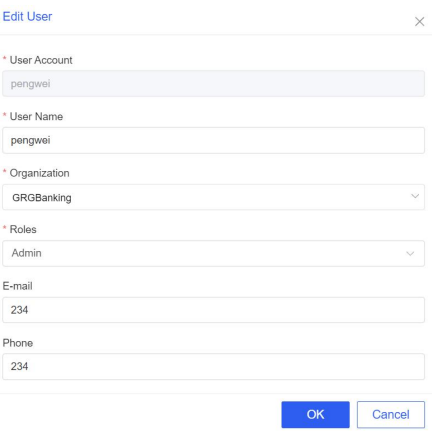

Figure 8-1-3Edit User Account Legend

- **[Delete]:** Delete system user account such as **Figure 8-1-4.**

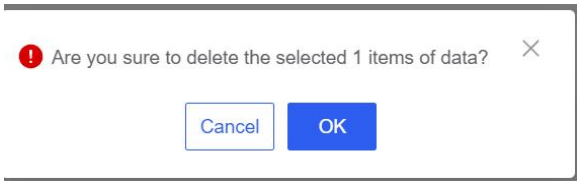

Figure 8-1-4 Delete User Account Legend

- **[Reset Password]:** When the system user forgets the password or the account is locked, you can click the [Rest Password] button. such as **Figure 8-1-5.**

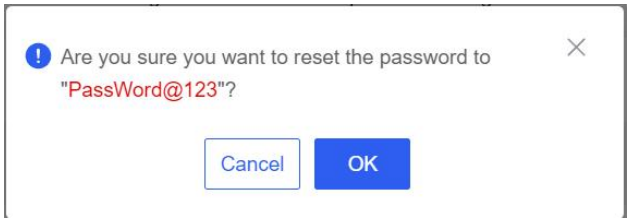

Figure 8-1-5 Reset Password Legend

- **[Search]:** Query user information based on conditions. such as **Figure 8-1-6.**

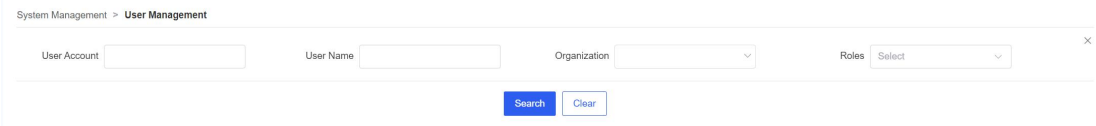

Figure 8-1-6 User Management Search Legend

8.2. Organization Management

The organization management settings page provides basic settings for the system's organization. The interface is shown below.

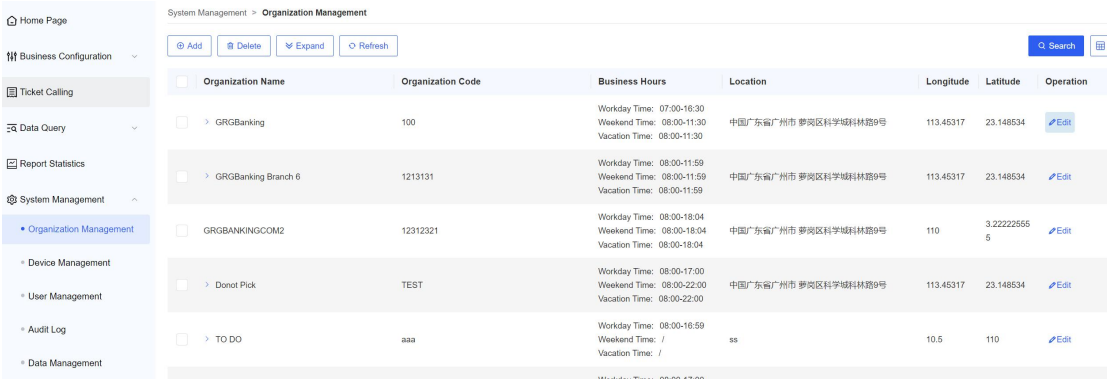

Figure 8-2-1 Organization Display Legend

Description of page function：

- **[Add]:** Establish a new organization, set the organization name, organization code, operating hours, latitude and longitude information of the organization such as **Figure 8-2-2.**
- **[Edit]:** Modifying user information allows for rebinding of user roles and institutions such as **Figure 8-2-3.**

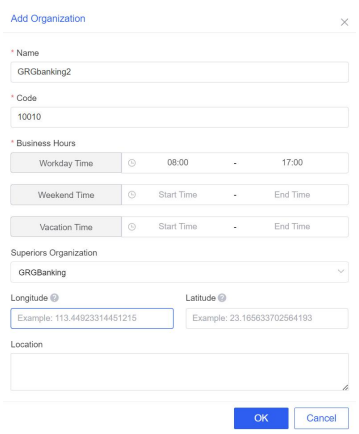

Figure 8-2-2 Add Organization Info Legend

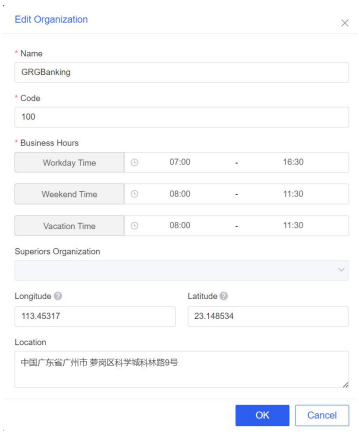

Figure 8-2-3 Edit Organization Info Legend

- **[Delete]: Delete Organization information** such as **Figure 8-2-4.**

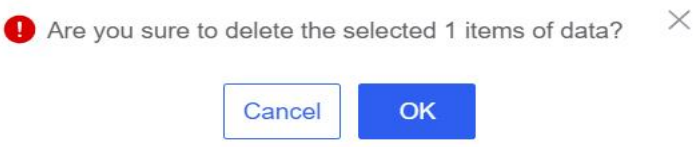

Figure 8-2-5 Delete Organization Information.

8.3. Device Management

Manage device information in the system as shown in 8-3-1.

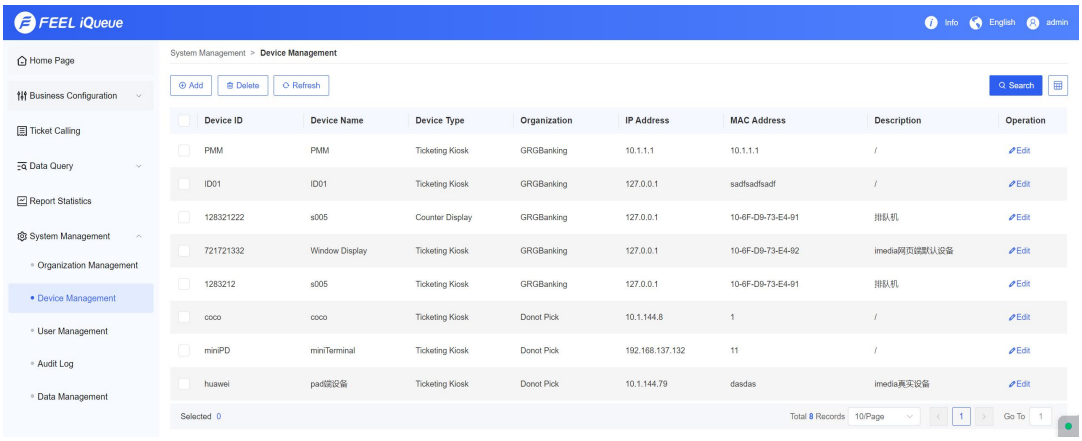

Figure 8-3-1 Device Management Page Information.

Description of page function：

- **[Add]:** Add device ID, device name, device organization, IP address, Mac address, device type such as **Figure 8-3-2**
- **[Edit]:** Modifying device information such as **Figure 8-3-3.**

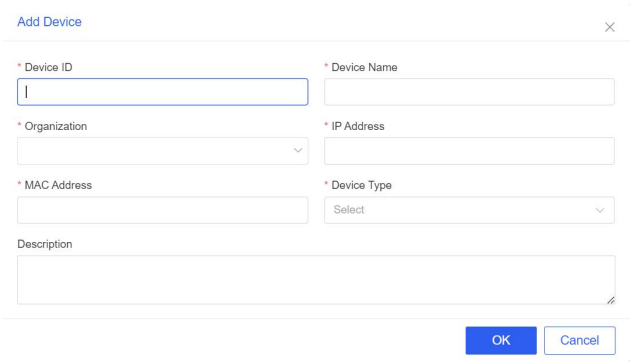

Figure 8-3-2 Add Device Page Legend

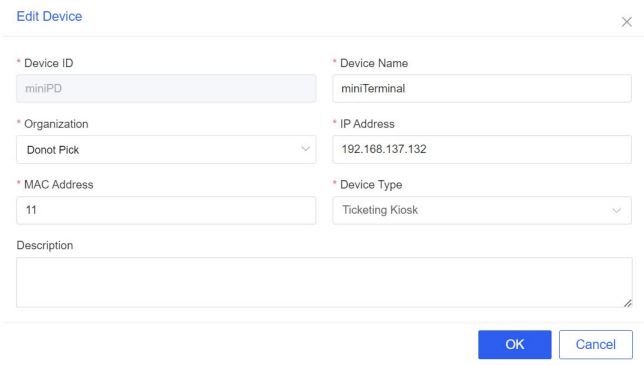

Figure 8-3-3 Add Device Page Legend

➢ **[Delete]:** Delete device information such as **Figure 8-3-4.**

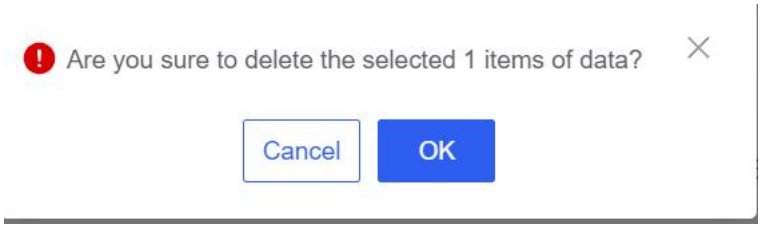

Figure 8-3-4 Delete Device Information Legend

8.4. Data Management

The data dictionary records the internal parameter information of the system, and users can make slight adjustments to the system by modifying the parameters of the data dictionary such as **Figure 8-4-1.**

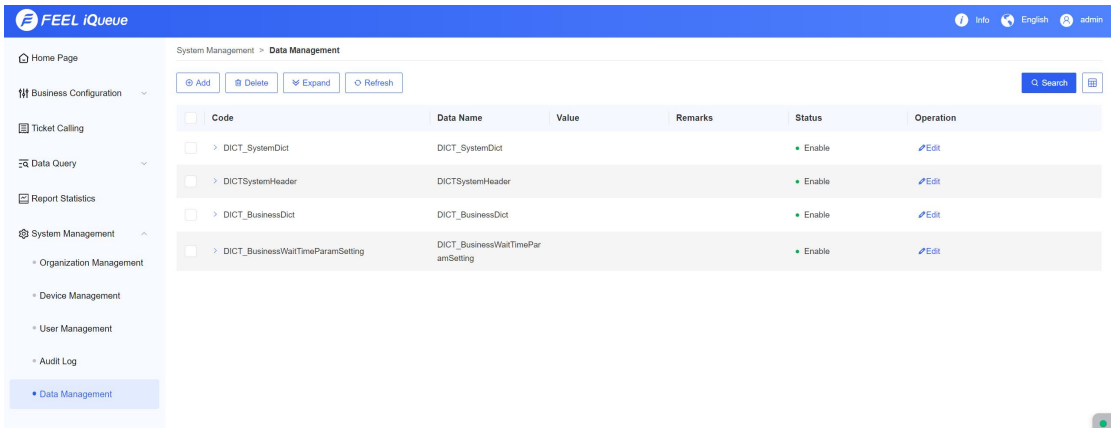

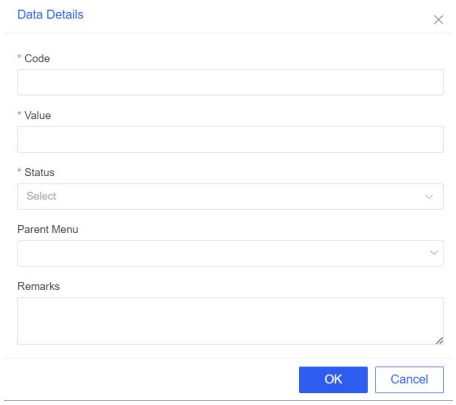

Figure 8-4-1 Data dictionary Information Legend

Description of page function：

➢ **[Add]:** Add data dictionary information for administrators or developers to add such as **Figure 8-4-2.**

➢ **[Edit]:** Modifying data dictionary information such as **Figure 8-4-3.**

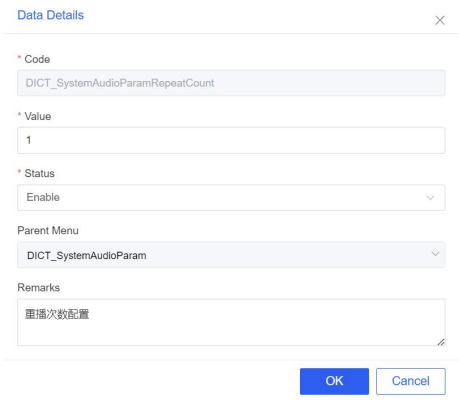

Figure 8-4-2 Add Data Dictionary legend **Figure 8-4-3 Modify Data Dictionary legend**

- **[Delete]:** Delete Data Dictionary Information such as **Figure 8-4-4.**

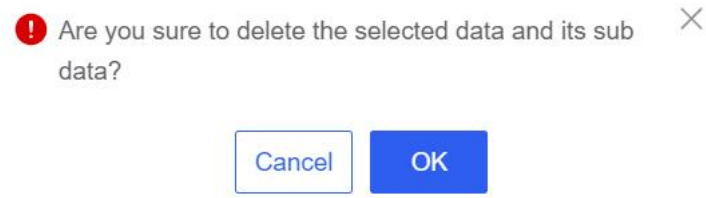

Figure 8-4-4.Delete Data Dictionary legend

- The following parameters are used to configure the window call expiration time and service expiration time,such as **Figure 8-4-5.**

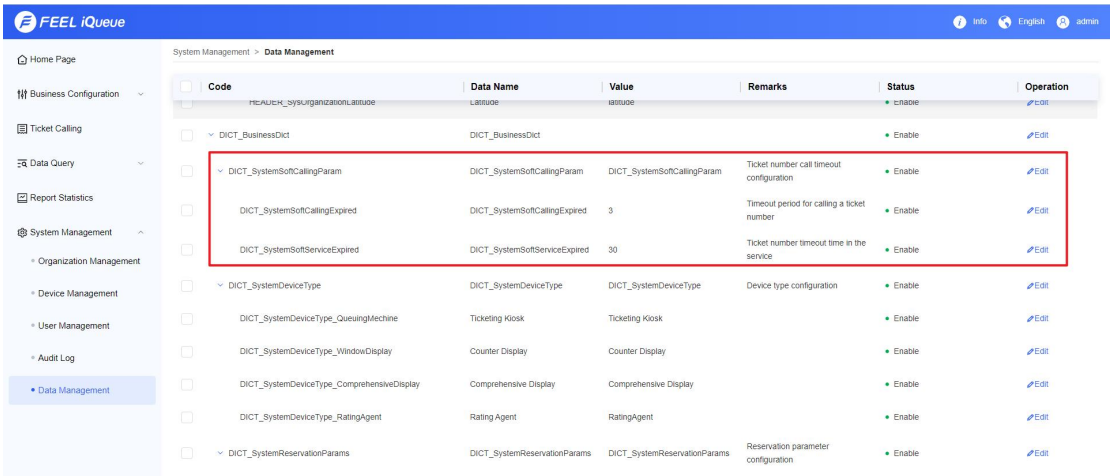

Figure 8-4-5 Counter data configuration legend

- The following parameters are used to configure the ticket prefix,and window transfer weights,such as **Figure 8-4-6**.

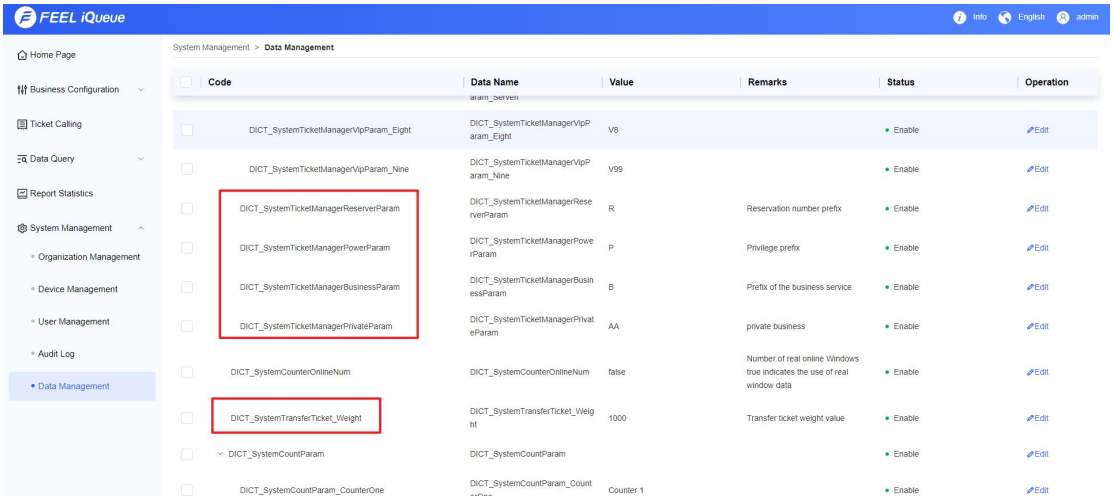

Figure 8-4-6 Ticket prefix configuration legend

8.5. Audit Log

The system audit log is used to record the operations performed by users in the system, such as modifications made to windows, businesses, institutions, etc., which will be recorded in the system such as **Figure 8-5-1.**

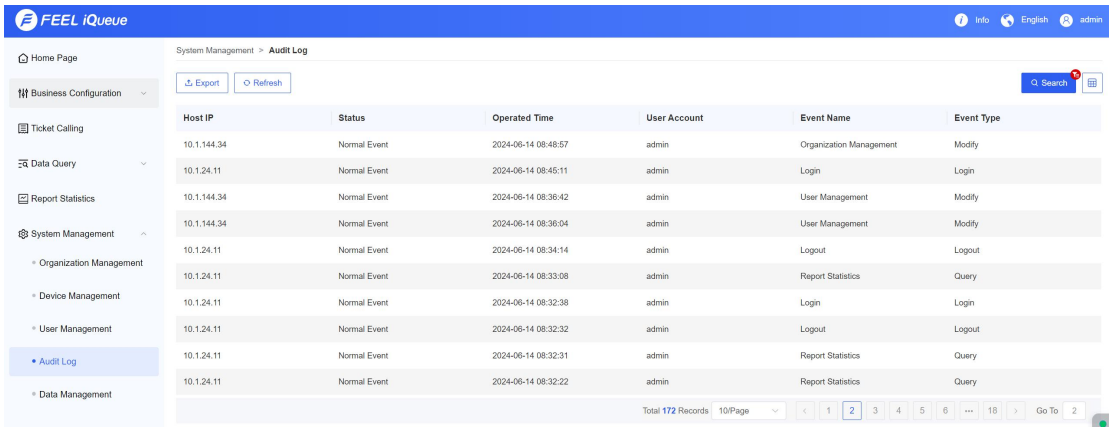

Figure 8-5-1 Audit Log Page Legend

Description of page function：

- **[Export]:** Export audit logs as PDF or Excel files such as **Figure 8-5-2**

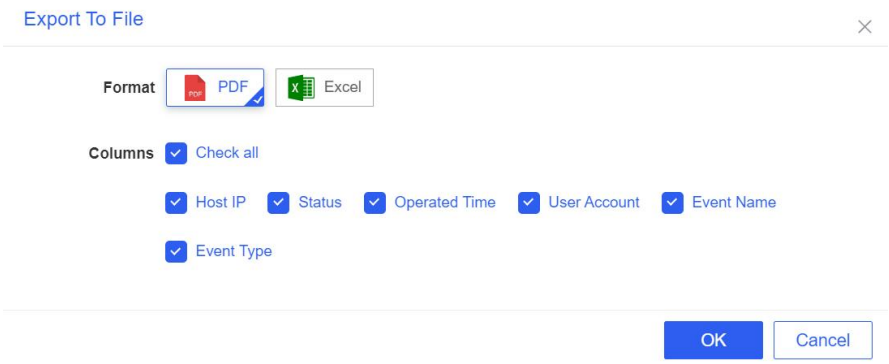

Figure 8-5-2 Export Audit Log File Legend

➢ **[Search]:** Query audit logs based on conditions such as **Figure 8-5-3**

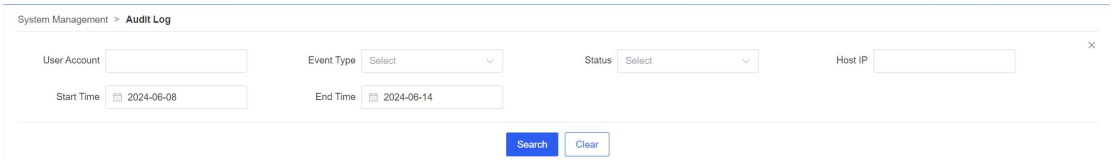

Figure 8-5-3 Audit Log Query Legend
